

ETO Sterilizer || ETO Sterilizer Machine || ETO Sterilizer Manufacturer || ETO Sterilizer Supplier || ETO Sterilizer Exporter

Krishna Engineering recognized and most demanded brand in the medical industry for wide range of [ETO Sterilizer Machine](#). We are one of the leading manufacturer, supplier and exporter of [ETO Sterilizer](#). Ethylene Oxide Sterilizer is one of the most well-known methods for the sterilization of medical instruments which are moisture or heat sensitive and cannot be sterilized with normal water. **Ethylene Oxide** is also known as **EO or ETO** which is a low temperature gaseous process used to sterilize a variety of healthcare products that are of single use. Sterilization of the medical instruments is done in low-temperature process that are typically between 37 and 63°C that uses **Ethylene Oxide gas** to reduce the level of infectious agents. It is mainly used for products that cannot withstand the heat of typical autoclave sterilization such as plastic.

There are Four types of **ETO Sterilization Chemical Process** that takes place while sterilizing the instruments such as gas concentration, humidity, temperature and time. Ethylene oxide is an agent that disrupts the DNA of microorganisms, which prevents them from reproducing. **EO sterilization** assures that a safe and sterile product will be delivered to the market each and every time. These are utilized for numerous mechanical and industrial applications to sterilize huge and medium-duty machines, instruments and equipment for safe and hygienic processing. The offered machines are

designed with heavy and thick metal materials that also insulates the entire structure. These have single insulation wall that make them simple to install and transport.
